About UIS Program

Urban Innovation and Sustainability (UIS) program aims to enhance the capacity of professionals in coping with growing and complex urban needs, challenges and opportunities. Innovation refers to development of new technologies such that they denote physical objects (e.g. products, services) and knowledge systems (e.g. methods, systems), and sustainability transition aims to meet socio-ecological system needs in ways that promote healthy ecosystems, human well-being, and viable economies. The program covers systems approach of multi-scale and cross-sector, and multi-agent connectivity and decision making. It also applies different methods of enhancing capacity, for emerging themes, e.g., ageing society, circular economy, smart buildings, responsible tourism and consumption, healthy and inclusive cities, etc.
